SUMMARY

Information Science student (GPA 3.8, University of Maryland, May 2026) with experience developing web applications, APIs, and AI-powered solutions. Proficient in Python and JavaScript with hands-on experience integrating cloud services, APIs, and data pipelines into scalable systems. Strong collaborator with a focus on writing maintainable code, debugging applications, and continuously learning new technologies to deliver high-quality solutions.

EDUCATION

B.S., Information Science | University of Maryland, College Park

GPA: 3.8 | May 2026

Relevant Coursework: Statistics for Information Science, Data Science Techniques, Database Design & Modeling, Object-Oriented Programming

A.A., Computer Science: Information Systems | Montgomery College

GPA: 3.6 | Aug 2024

Relevant Coursework: SQL using Oracle, Python Programming, Java Programming

EXPERIENCE

Software Engineer Intern | Technuf | Rockville, MD

Jun 2025 – Aug 2025

- Contributed to the design, development, and testing of an AI-powered web application using Python and FastAPI, reducing manual evaluation time by ~40%
- Integrated APIs and data processing workflows to transform unstructured data into structured outputs for reporting and analysis
- Collaborated with cross-functional team members in an Agile environment, participating in debugging, testing, and documentation
- Improved system performance and reliability by identifying issues, troubleshooting bugs, and refining backend logic

Server | Fogo de Chão | Rockville, MD

Jul 2020 – Present

- Developed strong communication and teamwork skills in a fast-paced environment, collaborating with team members to deliver consistent, high-quality service

PROJECTS

AI Image Analysis & Organization Tool | Python, Google Cloud Vision API

Feb 2026 – Present

- Built a workflow automation system that processes and classifies 1,000+ images, reducing manual organization time by ~80%
- Integrated Google Cloud Vision API to extract metadata and automate categorization across datasets
- Developed a desktop application for non-technical users with search, filtering, and reporting capabilities
- Wrote maintainable, modular code and documented system functionality for usability and scalability

AI Interviewer Platform | Python, NLP, OpenAI API, FastAPI, Streamlit

Jun 2025 – Aug 2025

- Developed a web-based application that processes unstructured data and generates structured evaluation reports
- Designed modular backend architecture and integrated APIs to support scalable data processing and reporting workflows
- Applied prompt engineering and AI integration techniques to enhance system capabilities

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, Java, TypeScript, R

Frameworks & Tools: FastAPI, Flask, Next.js, Streamlit, Git

Cloud & APIs: REST APIs, Google Cloud Vision API, Data Integration

Web: HTML, CSS

Concepts: API Integration, Workflow Automation, Debugging, Testing, Agile Development, Software Design
